

Sub
B1

1. (Once Amended) A structure for mounting a rectangular liquid crystal module on a cover that covers at least one face of a body of a portable data terminal or information processing equipment, comprising:

A1

a bottom plate which is put on the back side of a display face of the liquid crystal module;

an outside frame which is put on the side of the display face of the liquid crystal module and has an opening from which the display face can be exposed;

a projected portion for fitting the liquid crystal module between the bottom plate and the outside frame, the projected portion being made in at least one of upper and lower edges of the liquid crystal module so as to be projected in the direction parallel to the display face;

a through-hole which is formed in the projected portion and extends through the projected portion in the thickness direction of the liquid crystal module; and

a connection portion which is formed in the bottom plate and the outside frame and connects the two through the through-hole.

REMARKS

Claims 1-10 were rejected under 35 U.S.C. §112, second paragraph. Claim 1 has been rewritten to overcome this rejection.

Claims 1-5 were rejected under 35 U.S.C. §102(c) as being anticipated by Nagamura et al., (U.S. Patent No. 6,292,239). Claims 6-10 were rejected under 35 U.S.C. §103(a) as being unpatentable over Nagamura et al.
